the middle east command in the second world war covered a vast region stretching across egypt libya malta palestine and transjordan cyprus sudan eritrea most of syria and a small part of iraq and included some forty different languages at

one point it also oversaw operations in Greece, Kenya and British Somaliland. Its campaign area ran for a thousand miles from the Jordan to the Horn of Africa. Initially under the leadership of General Sir Archibald Wavell, Middle East Command's early actions were in contending with the Italian forces in Libya and Italian East Africa. He was soon distracted by the German invasion of Greece and the subsequent defence of and withdrawal from the island of Crete. With his attention turned from North Africa to the German-Italian forces in North Africa, they were able to hold their ground and even receive reinforcements in the form of Rommel's Afrika Korps. Wavell's despatches detail all of these campaigns up to July 1941 when he was superseded by General Claude Auchinleck. The AUK had to deal with the Anglo-Free French invasion of Syria and Lebanon and the nationalist uprising in Iraq. His main concern though was with stopping Rommel's advances through Libya. The Axis forces were eventually held close to the border of Egypt at El Alamein. It was as far as Rommel would go and it marked the end of the long run of Axis successes in North Africa. The despatches presented here form a unique collection of original reports from the commanding officers in this widespread and difficult region. This is the first time these documents have been brought together in a single volume.

a journal devoted to the discussion of political, economic and sociological questions.

Two surface flooding techniques for improving natural ice areas have been developed: confined flooding, in which the flood is retained by natural boundaries and dikes, is used principally for filling and leveling thick natural ice areas; free flooding, in which the outward flow of water is retained by freezing of the flood boundary, is generally used for accelerated thickening of relatively thin natural ice. This survey shows that adequate surface pumping units and flood distribution systems have been developed for confined flooding and subsurface pumping units are being developed for free flooding. Mobile power handling equipment is available for moving, lifting and placing the pumps and other heavy gear required for ice construction, but the available man handling gear for this work is less than adequate. Drills and augers are available for boring shallow holes in ice but not for deep holes. Electrical equipment and materials are available for cold weather operation of single pump installations but systems for operating several pumps from a single power source have not been fully developed. Hot air heaters, air compressors, chain saws and other miscellaneous gear required

for all types of ice flooding are available from commercial sources it was concluded that continued development of the subsurface pumps and the necessary supporting equipment is needed to advance the techniques for leveling and strengthening natural ice areas author
