the three volume set ccis 1467 ccis 1468 and ccis 1469 constitutes the thoroughly
refereed proceedings of the 7th international conference on life system modeling and

simulation lsms 2021 and of the 7th international conference on intelligent computing for sustainable energy and environment icsee 2021 held in hangzhou china in october 2021 the 159 revised papers presented were carefully reviewed and selected from over 430 submissions the papers of this volume are organized in topical sections on medical imaging and analysis using intelligence computing biomedical signal processing imaging visualization and surgical robotics computational method in taxonomy study and neural dynamics intelligent medical apparatus clinical applications and intelligent design of biochips power and energy systems computational intelligence in utilization of clean and renewable energy resources and intelligent modelling control and supervision for energy saving and pollution reduction intelligent methods in developing electric vehicles engines and equipment intelligent control methods in energy infrastructure development and distributed power generation systems intelligent modeling simulation and control of power electronics and power networks intelligent techniques for sustainable energy and green built environment water treatment and waste management intelligent robot and simulation intelligent data processing analysis and control in complex systems advanced neural network theory and algorithms advanced computational methods and applications fuzzy neural and fuzzy neuro hybrids intelligent modelling monitoring and control of complex nonlinear systems intelligent manufacturing autonomous systems intelligent robotic systems computational intelligence and applications

advanced manufacturing systems are vital to the manufacturing industry it is well known that if a target work piece has a curved surface then automation of the polishing process is difficult controller design for industrial robots and machine tools presents results where industrial robots have been successfully applied to such surfaces presenting up to date information on these advanced manufacturing systems including key technologies chapters cover topics such as velocity based discrete time control system for industrial robots preliminary simulation of intelligent force control cam system for an articulated industrial robot a robot sander for artistic furniture a machining system for wooden paint rollers a polishing robot for pet bottle blow moulds and a desktop orthogonal type robot for finishing process of led lens cavity and concludes with a summary the book is aimed at professionals with experience in industrial manufacturing and engineering students at undergraduate and postgraduate level presents results where industrial robots have been used successfully to polish difficult surfaces presents the latest technology in the field includes key technology such as customized several position and force controllers

handbook of robotic and image guided surgery second edition provides an update on state of the art systems and methods for robotic and computer assisted surgeries written by leading researchers from academia and industry this new edition includes over 700 illustrations flowcharts diagrams and dedicated multimedia content across all chapters this new edition also includes introductory chapters which discuss the fundamental concepts in robotics and image guided surgery through its coverage of basic concepts and recent advances across all subspecialties the book serves as a vital and comprehensive reference for engineers surgeons and researchers in the life science and healthcare world interested in surgical robotics fusing engineering radiology and surgical principles into one book this new edition also includes coverage of new surgical devices and new surgical robotic systems expanding the number of chapters from 39 to more than 50 biomedical engineers mechanical engineers electrical and computer engineers medical and engineering students and surgeons in the field of surgical robotics and image guided surgery will benefit from this comprehensive reference written by global experts from across academia and industry an excellent sampling of the current state of the art in this rapidly developing field 300 more images flowcharts diagrams chapters dedicated to fundamental knowledge of the mathematical tools that are required in the field of robotic and image guided surgery

for the third year in a row we are very happy to offer our readership an ebook of 11 articles that have achieved widespread acceptance within our core audience and beyond this time it concerns articles published in 2024 these papers are among the large number that attained significant interest last year but we selected just 11 which we consider to be the best these articles have already made an impact in the form of original research or comprehensive reviews as the field chief editor i would like to stand alongside our journal staff to honor all authors who contributed very high level papers to the journal last year and are contributing to our success we also thank the editors and reviewers of these papers and of all papers this past year for their invaluable contribution
