the search for an accurate knowledge of the transfer of energy and water in our climate system and of all participating processes is still a burning issue

within environmental and climate research more reliable ways should be found to model them in their complex interplay with cascades of processes in that system and their impact on all our resources on earth such modelling needs also validation with accurate and complete observations which in turn should also enable to observe variations of climate components these are the goals of the global energy and water experiment gewex which began its work about 8 years ago many advanced remote sensing capabilities have now been developed of which only a few will enter into satellite based platforms these new developments should be brought to the attention of a broader community of younger scientists in particular of those countries which quite recently could open their borders for free exchanges

this book presents a comprehensive approach to address the need to improve the design of tailings dams their management and the regulation of tailings management facilities to reduce and eventually eliminate the risk of such facilities failing the scope of the challenge is well documented in the report by the united nations environment program unep and grid arendal entitled mine tailings storage safety is no accident which was released in october 2017 the report recommends that regulators industry and communities should adopt a shared zero failure objective to tailings storage facilities and identifies several areas where further improvements are required in this context the application of cutting edge risk assessment methodologies and risk management practices can contribute to a significant reduction and eventual elimination of dam failures through risk informed decision making as such the book focuses on identifying and describing the risk assessment approaches and risk management practices that need to be implemented in order to develop a way forward to achieve socially acceptable levels of tailings dam risk

reflectance and emittance spectroscopy are increasingly important tools in remote sensing and have been employed in most recent planetary spacecraft missions they are primarily used to measure properties of disordered materials especially in the interpretation of remote observations of the surfaces of the earth and other terrestrial planets this book gives a quantitative treatment of the physics of the interaction of electromagnetic radiation with particulate media such as powders and soils subjects covered include electromagnetic wave propagation single particle scattering diffuse reflectance thermal emittance and polarisation this new edition has been updated to include a quantitative treatment of the effects of porosity a detailed discussion of the coherent backscatter opposition effect a

quantitative treatment of simultaneous transport of energy within the medium by conduction and radiation and lists of relevant databases and software this is an essential reference for research scientists engineers and advanced students of planetary remote sensing

the impact of bistatic radar technology on remote sensing is increasing as bistatic systems cross the theoretical threshold into practical embodiment the wide spectrum of radar applications including space exploration defence transport aerospace and meteorology provides persistent impetus for this progress this book is dedicated to the more advanced studies in bistatic radar which are currently the subject of intensive research activity and development with contributions from the leading experts in the field of bistatic radar research this book collates the latest developments in the field focusing particularly on bistatic synthetic aperture radar bsar and passive bistatic radar systems pbrs within these two areas the text addresses the main bsar topologies spaceborne bsar airborne bsar and space surface bsar analyses the resurgent interest in and practical applications of pbrs introduces passive bsar technology covers research of systems used in aircraft detection and tracking and passive radar remote sensing of the ionosphere and the upper atmosphere bistatic radar emerging technology is an invaluable resource for practising engineers and researchers involved in the design and implementation of advanced bistatic radar systems in aerospace communications defence transport and meteorology following on from bistatic radar principles and practice it is also a comprehensive reference on the latest research for postgraduate students taking specialist courses in radar technology
