this open access book addresses the issue of diffusing sustainable energy access in low and middle income
contexts access to energy is one of the greatest challenges for many people living in low income and developing
contexts as around 1 4 billion people lack access to electricity distributed renewable energy systems dre are
considered a promising approach to address this challenge and provide energy access to all however even if
promising the implementation of dre systems is not always straightforward the book analyses discusses and
classifies the promising sustainable product service system s pss business models to deliver distributed
renewable energy systems in an effective efficient and sustainable way its message is supported with cases
studies and examples discussing the economic environmental and socioethical benefits as well as its limitations
and barriers to its implementation an innovative design approach is proposed and a set of design tools are
supplied enabling readers to create and develop sustainable product service system s pss solutions to deliver

distributed renewable energy systems practical applications of the book s design approach and tools by companies and practitioners are discussed and the book will be of interest to readers in design industry governmental institutions ngos as well as researchers

case studies in energy systems a practical approach to energy system design and analysis demonstrates the application of both fundamental and advanced principles by providing a broad range of case studies examples and models opening with a clear summary of the foundational theory this book then presents a selection of case studies based on the experience of experts examples are analyzed in a holistic context considering environmental economic and technological aspects finally the authors have provided models codes and calculation spreadsheets where appropriate allowing readers to test the tools for themselves equipping researchers and advanced students for the transition to industry practice this book is a guide to real world problem solving for the energy future examines a range of case studies across the spectrum of energy systems demonstrating the application of theory to practice enables the holistic analysis of problems covering environmental economic and technological aspects equips researchers and industry professionals with the tools and problem solving skills required to meet the challenges of the energy transition

this widely admired standalone guide is packed with creative tips on how to enhance and expand your physics class instruction techniques it s an invaluable companion for novice and veteran professors teaching any physics course

in this study i adopted a combined individual and sociocultural perspective on learning in order to investigate small group discussions in an inquiry based middle school science classroom the specific purpose of the study was to answer the following research questions a how can we classify students sense making statements b to

what extent do students engage in sense making discussion and c which factors provide support for students to answer these questions two groups were videotaped during the interactions and motion unit from the constructing ideas in physical science middle school curriculum to classify students sense making statements i developed a six component framework for sense making discussion my six components of sense making discussion are predicting a phenomenon or experimental outcome clarifying the facts of a phenomenon or experimental result describing and explaining a phenomenon or experimental result defining describing clarifying and connecting scientific concepts procedures processes and representations testing knowledge compatibility and making a request for any of the above the extent of students sense making discussions was established by a documenting instances of student sense making according to the six component scheme and then forming distributions of sense making instances and b calculating the percentage of time that groups dedicated to sense making discussion to determine the influence that various factors have on students sense making discussions i first drew on the research in collaboration discourse and nonverbal sense making to arrive at an initial list of personal group task and contextual factors that would likely influence the sense making in this study i then picked out significant quantitative differences in sense making between groups students and different portions of the curriculum cycles sub sections etc and determined to what extent the initial list of factors contributed to the significant differences in sense making and also to what extent any additional factors contributed to these differences my analysis showed that many of the factors from the initial list helped to explain the differences in sense making i also identified six other factors that contributed to these differences capacity for intra group guidance intellectual capacity time available for sense making external guidance awareness of the curriculum structure and an awareness and valuing of the curriculum goals
